

# DFAST1050

## De-stress with IFE Group

DFAST1050 is IFE Group's one-stop solution to the challenges faced by financial institutions due to the continual expansion and uncertainty of the DFAST regulatory landscape. Built on a top-down approach, DFAST1050 is designed to help smaller financial institutions address the analytical complexities and resource constraints of adhering to the regulatory requirements. Featuring submission-ready reporting, an integrated design, and comprehensive documentation, DFAST1050 is built by subject-matter experts to help you navigate the regulatory terrain. Coupled with advisory services tailored to meet your specific needs, IFE Group's DFAST1050 is your turnkey solution.

## DFAST1050: Your One-Stop Solution

Incorporating essential bank, industry, and market data, DFAST1050 is based on the Capital and Loss Assessment under Stress Scenarios (CLASS) model to project key capital ratios, net charge off rates, allowance for loan and lease losses (ALLL), and asset growth rates, among others, to produce submission-ready reports.

DFAST1050 also assists you in benchmarking against the industry and validating your existing stress testing methodology to better inform you of your overall risk level. Combined with additional advisory services calibrated to meet your specific needs, DFAST1050 is your hassle-free, one-stop solution.

## Integrated Financial Engineering Inc. (IFE Group)

We are a boutique consulting firm specializing in advanced statistical and modeling services. Consisting of highly skilled financial modelers and strategists, IFE Group offers an array of products and consulting services, including risk management, stress testing, and modeling. Coupling our advanced financial and modeling capabilities with an in-depth understanding of regulatory requirements, IFE Group helps your institution demystify requirements and enhance your stress testing framework.
